

OVERVIEW OF HARDWARE COMPONENTS

1. Draw a labeled diagram of a desktop PC, clearly marking the motherboard, CPU, RAM, GPU, and both HDD and SSD storage components?

Ans.

OVERVIEW OF HARDWARE COMPONENTS

2. Compare HDD and SSD based on speed, durability, and usage?

Ans.

Feature	HDD	SSD
Speed	HDD is slower than SSD.	SSD works faster and opens files quickly.
durability	HDD has moving parts, so it can get damaged easily.	SSD has no moving parts, so it is stronger and more durable.
Usage	HDD is mostly used to store a large amount of data.	SSD is used when we need faster performance and quick booting.
Noise	HDD can make some noise while working.	SSD does not make noise because it has no moving parts.
Power Consumption	HDD uses more power while working.	SSD uses less power than HDD.

3. Explain the role of CPU, RAM, and GPU in running games like PUBG or Free Fire ?

Ans.

CPU: CPU is the main processor of the computer. It handles game instructions, player movement, controls, and other calculations. A good CPU helps the game run smoothly.

RAM: RAM stores the game data temporarily while we are playing. More RAM helps the game load properly and reduces lag when other applications are also running.

GPU: GPU is responsible for displaying the game graphics. It processes characters, maps, colors, shadows, and animations. A good GPU gives better graphics and smoother gameplay.

OVERVIEW OF HARDWARE COMPONENTS

4. Which PC hardware components should be upgraded to run the latest FIFA smoothly?

Ans.

1. GPU (Graphics Card): A good GPU is important for showing game graphics clearly. It helps provide smooth gameplay, better resolution, shadows, and other visual effects.

2. CPU (Processor): The CPU handles the main game calculations and instructions. A faster CPU helps the game respond quickly and reduces lag during playing.

3. RAM: RAM stores the game data temporarily while the game is running. Increasing RAM helps the game run smoothly and also allows other applications to run in the background.

4. SSD: An SSD provides faster data access than an HDD. It helps FIFA start quickly, reduces loading time, and makes the overall system more responsive.
